Q. What are the differences between Tableau, Power BI, and MS Excel?

Ans.

- **Purpose & Strength:** Tableau = **visual analytics** and storytelling with rich, interactive visualizations; Power BI = **business-focused BI** with strong self-service reporting and Microsoft ecosystem integration; Excel = **spreadsheet tool** for ad-hoc analysis, modelling and quick data manipulation.
- **User experience & learning curve:** Tableau emphasizes **drag-and-drop visual design** (fast for analysts); Power BI is familiar to Excel users and easier for business users in Microsoft...read more

Q. What are LWC life cycle hooks, and when do you use the rendered callback?

Ans. Lightning Web Components have a predictable set of lifecycle hooks: **constructor** (initialize JavaScript state), **connectedCallback** (component inserted in DOM, good for setup and wire invocations), **renderedCallback** (called after each render of the component's template), **disconnectedCallback** (cleanup when removed), and **errorCallback** (handle errors from child components). There's also the **render()** method to customize template selection. Use each to manage specific phases: con...read more

I appeared for an interview in Jun 2025, where I was asked the following questions.

Q1. Asynchronous Apex, and explain where you have used async apex over sync apex.

Ans. Asynchronous Apex allows for non-blocking operations, improving performance in Salesforce applications.

- Used Queueable Apex for processing large data sets without hitting governor limits.
- Implemented Batch Apex to handle bulk data operations, such as mass updates or inserts.
- Utilized Future methods for making callouts to external services without delaying user interactions.
- Example: In a healthcare application, used Batch Apex to process patient records nightly.

Q2. What is LWC Life Cycle hooks, when do you use rendered callback

Ans. LWC lifecycle hooks manage component behavior during its lifecycle, with renderedCallback for DOM manipulation after rendering.

- LWC has several lifecycle hooks: constructor, connectedCallback, renderedCallback, and disconnectedCallback.
- renderedCallback is called after every render of the component, making it ideal for DOM manipulations.
- Use renderedCallback when you need to interact with the DOM after the component has been rendered, such as initializing third-party librar... read more
