I appeared for an interview in Nov 2025, where I was asked the following questions.

Q1. How do you handle missing or inconsistent data in a dataset?

Ans. I handle missing or inconsistent data through various techniques like imputation, removal, and validation to ensure data integrity.

- Identify missing values using methods like 'isnull()' in Python's pandas library.
- Impute missing values with mean, median, or mode based on the data distribution.
- Remove rows or columns with excessive missing data, e.g., if more than 30% of values are missing.
